Professional Summary

Computer Science undergraduate with strong foundations in algorithms, systems programming, and full-stack development. Built production-style applications using React and Spring Boot, and solved 600+ competitive programming problems across Codeforces, CodeChef, and LeetCode. Experienced in REST APIs, real-time systems with WebSockets, and JWT-based authentication. Actively participates in CTF competitions, with top rankings in web exploitation, cryptography, and reverse engineering. Interested in backend engineering, distributed systems, and cybersecurity.

Skills

- **Languages:** C, C++, Java, Python, JavaScript
- **Core CS:** Data Structures & Algorithms, Object-Oriented Programming, Operating Systems
- **Frontend:** React, HTML, CSS, Vite
- **Backend:** Spring Boot, REST APIs, WebSocket, JWT Authentication
- **Databases:** MySQL, SQLite
- **Tools & Frameworks:** Git, JavaFX/FXML, SDL2, Apache PDFBox
- **Security & CTF:** Web Exploitation, Cryptography, Reverse Engineering, Digital Forensics

Education

- **University of Dhaka** — B.Sc. in Computer Science & Engineering 2024 – Present (Expected 2028)
Relevant Coursework: Data Structures, Algorithms, Data & Telecommunications, Database Management Systems, Object-Oriented Programming

Technical Projects

MediMart — Full-Stack Web Application | [Frontend](#) | [Backend](#) | *React, Spring Boot, WebSocket, JWT, MySQL*

- Built a full-stack pharmacy management platform with JWT-based authentication and role-based access control for admin and customer roles.
- Implemented real-time inventory synchronization using WebSockets, enabling live stock updates across the admin dashboard.
- Designed automated PDF invoice generation and an order tracking system with admin controls for inventory management.

MediMart — JavaFX Desktop Application | [GitHub](#) | *JavaFX, FXML, SQLite, Apache PDFBox*

- Architected a modular desktop pharmacy system using MVC architecture with FXML-based UI components.
- Integrated SQLite persistence and implemented PDF invoice export using Apache PDFBox.
- Built end-to-end order workflows with authentication and cart management modules.

Escape Room Conquest — 2D Puzzle Adventure Game | [GitHub](#) | *C++, SDL2*

- Developed a multi-level escape room game in C++ using SDL2, featuring themed floors and modular puzzle systems.
- Implemented algorithmic challenges including RSA decryption, circuit puzzles, and Tetris mechanics.

- Built a contextual AI hint system (J.A.R.V.I.S.) that dynamically assists players based on in-game actions.

DSA Practice Repository | [GitHub](#) | *C++*, *Python*

- Maintained a curated repository of optimized solutions covering dynamic programming, graph algorithms, trees, and number theory.
- Practiced across Codeforces, CodeChef, and LeetCode, improving algorithmic problem-solving speed and complexity optimization.

Achievements

- **Competitive Programming**

- Solved **600+** algorithmic problems across [Codeforces](#), [CodeChef](#), and [LeetCode](#).
- Codeforces Rating: **1190** | CodeChef Rating: **1369**

- **Cybersecurity (CTF Competitions)**

- Ranked **21st out of 702 teams** in Ramadan CTF 2026 as part of **DU_CyberPhantoms**, solving challenges in web exploitation, cryptography, and reverse engineering (Score: 1415).
- Ranked **52nd** in Al Khwarizmi CTF 2025 as part of **DU_CyberPhantoms**, placing in web exploitation and cryptography tracks.

Interests

Problem Solving, Application Development, Cybersecurity & CTF, Distributed Systems, Cricket
